

OPEYEMI DANIEL

Machine Learning Engineer • Data Scientist

Glasgow, UK • 07867 066637 • [Email](#) • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFILE

Machine learning engineer and data scientist with three years of professional experience across fintech and telecoms. Hands-on with the full ML lifecycle — training and evaluating classification and NLP models, building RAG-based assistants, and deploying them as containerised services through CI/CD pipelines to live cloud endpoints — alongside strong data-analytics and ETL foundations. Currently completing an MSc in Machine Learning & Deep Learning at the University of Strathclyde, seeking a graduate or junior ML / Data Scientist role in the UK.

EDUCATION

University of Strathclyde — Glasgow, UK

Jan 2026 – 2027 (Expected)

MSc Machine Learning & Deep Learning

Covenant University — Nigeria

2018 – 2023

BEng Computer Engineering — First Class Honours (4.64 / 5.00)

PROFESSIONAL EXPERIENCE

AI & ML Engineer | Wema Bank

Aug 2025 – Dec 2025

- Trained and evaluated machine learning models on banking data, including an intent-classification model for customer queries and a classification model for decision-support workflows.
- Built a conversational banking assistant combining the intent classifier with a RAG engine (embeddings + cosine similarity) and Azure Speech for text and voice interactions.
- Packaged and deployed models end-to-end — containerised with Docker and shipped to a live Azure endpoint via a CI/CD pipeline, with scoring and inference APIs.
- Contributed Python backend development to WeMart, a campus e-commerce platform.

Network Performance Engineer | Huawei

Dec 2023 – Jul 2025

- Analysed large-scale 2G–5G network telemetry using Python (Pandas), turning raw performance data into actionable insight on degradation and capacity.
- Designed ETL pipelines in Python and PostgreSQL and automated KPI reporting dashboards, cutting manual reporting effort and reducing reporting errors.
- Used data analysis to flag at-risk network sites early, contributing to improved uptime and faster issue resolution.
- Tuned RAN parameters, throughput and interference based on performance analytics across monitored sites.

Software Development Engineer | IHS Towers

Mar 2022 – Dec 2022

- Developed RESTful APIs in Python and SQL for user authentication, data retrieval and workflow automation.
- Configured LAN networks and servers and analysed infrastructure to improve system stability, collaborating with networking teams across departments.

SELECTED PROJECTS

Brain Tumour Classification — Medical App

Python • TensorFlow • Flask • Flutter

- Trained a CNN with transfer learning reaching 99% test accuracy on MRI brain-scan classification.
- Served the model through a Flask inference API integrated into a Flutter medical-appointment mobile app.

AI Banking Assistant (RAG + Voice)

Python • Azure • Docker • CI/CD

- Built an intent-classification model with confidence-based fallback and a RAG engine using embeddings and cosine similarity.
- Deployed text and voice endpoints (Azure Speech) as a containerised service shipped to a live Azure endpoint via a CI/CD pipeline.

Full-Stack & Backend Applications

Django • Flask • Quasar/Vue • AdonisJS • Firebase

- Built REST APIs and real-time backend services, including the WeMart e-commerce backend and a movie-database API.
- Developed full-stack web apps using Django, Flask and Quasar/Vue with Firebase and PostgreSQL data layers.

Data Engineering & Web Scraping

Python • PostgreSQL • Playwright • Selenium

- Built ETL pipelines over PostgreSQL and REST APIs and automated data extraction with BeautifulSoup, Selenium and an asynchronous Playwright scraper.
- Developed predictive analytics models (Pandas, Scikit-learn) and exploratory data analyses with Matplotlib.

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, C, C++, Dart, HTML/CSS

Machine Learning & AI: TensorFlow, Scikit-learn, Deep Learning, CNNs, NLP, RAG, embeddings, Pandas, NumPy

Backend, MLOps & Web: Flask, FastAPI, Django, REST APIs, Docker, CI/CD, model deployment

Databases, Cloud & Tools: PostgreSQL, Firebase, Microsoft Azure, AWS, Linux, Git, web scraping (Playwright, Selenium)

CERTIFICATIONS

- AI & ML Engineer — Dbrown Academy / Wema Bank • Data Analytics & Data Science — IBM • Programming for IoT — UC Irvine (Coursera) • Python & Django — Udemy
